Air Scrubber

Our mobile sleeping trailers all contain Air Scrubbers by Aerus. These units attach directly to our HVAC units to remove air pollutants, VOS's, dust and are proven to kill over 90% of RNA viruses including coronavirus. Further, certified space technology continually protects and purifies the air.

iWave Air

iWave is an air purifying device that installs directly to our air conditioning system. When air passes over the iWave, ions produced by the device reduce pathogens, allergens and particles. The iWave purifier has proven to inactivate the novel coronavirus. In less than thirty minutes 99.4% of the virus is eliminated.

Disinfectant

Monofoil antimicrobial spray is engineered to provide protection for 30 days or longer while also being non-toxic and non-leaching like most commercial cleaners. Monofoil is applied on all surfaces in the cabin as well as the return air filter.

Commerical Fire Alarm System

Each exit contains an alarm pull station with a strobe light feature on the exterior. Included in our fire safety plan are added carbon monoxide and smoke detectors.

Distance

Our mobile sleeper trailers have been subdivided to allow for less contact and more distance between individuals. The mobile sleeper has been partitioned into three sections, each equipped with a private entrance and exit door. The cabins air is continually purified and Monofoil cleaner is used on all surfaces.
